DETAILED ACTION

This application was filed 7/18/2006 and is a 371 of PCT/JP05/01034 (1/20/2005) which claims priority to JP 2004-013402 (1/20/2005). Claims 1-21 are before the Examiner.

Claim Rejections - 35 USC § 102/103

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-21 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Yamasaki (US Patents 5476858, 5480891, and 5576331), Uchida (US Patent 4578381), Urashima (US patent 6060486) and Matsuda (US Patent 5637597).

Art Unit: 1625

4. Yamasaki, Uchida, Urashima and Matsuda all teach the instantly claimed compound

and its salts. This is inherent, 102(b).

5. Yamasaki, Uchida, Urashima and Matsuda all teach the instantly claimed compound

and its salts generically. The difference is that these references do not teach the specific amine salts specifically claimed. However, it would have been obvious to one of ordinary skill in the art at the time of the invention to change one salt for another pharmaceutically acceptable salt in a compound having several pharmaceutical uses. Rationale: All the claimed elements were known in the prior art and one skilled in the art could have combined the elements as claimed by known methods with no change in their respective

functions, and the combination would have yielded predictable results to one of ordinary skill in the art at the time of the invention.
